

Swine Flooring System

The Symbol of Quality

Modular components are configured to match almost any size of farrowing layout. Choose from durable cast iron or Swing plastic center sections paired with interlocking creep sections.

Cast Iron Center Section

Smooth edge openings reduce sow injuries. Longer sizes require only two sections per crate preventing sows from moving a section out of place.

Creep Panels

Offers an excellent combination of traction, comfort, and cleanliness for small piglets. Available in a variety of sizes with 3/8" slot width.

Center sections dovetail with creep panels and lock on to the DUO fiberglass supports. End cap pedestal seals and stabilizes supports.

Swine Slat offers a variety of interlocking cast flooring sizes. Hog Slat cast flooring is designed to fit the most common sized crates by utilizing only two pieces of cast flooring, as opposed to many other types which require up to 3-5 pieces to complete the flooring for common crate sizes. Fewer cast pieces aid in the integrity of the floor.

Beam Support

Delta Beam's edge profile interlocks with the flooring sections for extra security. Corrosion resistant fiberglass construction and triangular shape avoid manure buildup while furnishing high load bearing and buckling stability.

Support Leg Set

Provides intermediate support for longer beam installations.
